Arx,

Testa esse procedimento ai. Testei aqui e não deu regae não, mas tente na sua para ver se funciona.

- 1) Turn off printer.
- 2) Hold down "+" and "-" buttons at the same time, and keep them held down while turning printer back on... continue to hold until the word "OKIUSER" appears.
- 3) Use "-" button to scroll down to "FUSE KEEP MODE".
- 4) Press "Enter" button, hold for approx. 10 seconds, then release.
- 5) Press "Enter" button again, followed by rapid release and repress with hold for approx. 10 seconds.
- 6) Release "Enter" button, then press and let up one more time quickly.
- 7) You will see "INITIALING" and then "ONLINE" messages.

Um abraço.
