Sigsync is a powerful web based email signature solution that allows creating and managing email signature for all Office 365 and Exchange users across the organization.

It is a centrally managed email signature solution which doesn't need any desktop application to populate Office 365 email signatures. It is a platform independent email signature service and works on Windows, Mac, Mobile, Linux etc.

Every email appended with signature provides an opportunity to promote individual as well as company brand. Sigsync supports company branding by including profile image, company logo, contact details, social media icons, website links, mobile apps links, web analytics, OneClick survey etc. in your signature which provides brand acknowledgment to your company.

Key Features of the email signature management service:

1. Centralized email signature management to monitor signatures for all Office 365 / Exchange users at one place.
2. Allows creating different signatures for different products or campaigns or based on the keywords for various countries using multiple signature rules.
3. Outlook Add-in helps to preview your signature signature during email compose.
4. Supports email signature for all the email clients & devices including Windows, Mac, Mobile, Linux etc.
5. Supports to add profile pictures, company logo, contact details, banners, and social media icons in email signature to have a professional look.
6. Retrieves Azure AD details and adds them in email signature.
7. Adds email signatures under replies and forward mails.
8. Supports web analytics and OneClick surveys.
9. Allows to enable signature for sent emails.
